Maintenance

Aluminum

Our kitchens built with high-quality, powder-coated aluminum. The material and the unique paint method creates the ideal combination for outdoor furniture, this way we ensure high resistance to corrosion and oxidation to our product.

The use of aluminum offers numerous environmental advantages: a very long service life and the possibility of recycling. Moreover, you don't need any unsafe detergents for maintenance.

Cleaning:

Water and non-caustic fluid detergent or a clear plastics cleaner.

Maintenance:

Every six months apply Silicone spray to lubricate door hinges (We recommend MOTIP M107).

Avoid:

- * Use of abrasive or caustic products.
- * Combustible materials should not be stored inside the grill unit, gas canister in particular.
- * Installation of gas and electricity should be made by a qualified technician only.
- * Avoid oil spill on aluminum surface, if occurs, clean rapidly.

Storage:

Cover when not in-use.
